OSE II Soil Clean Up, Non Regulations For The Use Of OSE II For Canada

To All Potential End Users or Responsible Parties,

The OSEI Corporation as well as Bioremediation Canada, separately performed comprehensive searches within the Canadian government as well as Provinces and territories. The search included face to face meetings, as well as phone conversation's with government regulators, in regards to any type of approval/s for the clean up of contaminated soil/s in Canada.

The date of this letter, the government of Canada has not developed an approval process for the clean up of contaminated soil/s in the territory of the country of Canada. Based on the information we have developed from regulators at Environment Canada, they acknowledge there are no regulations, or barriers to the use of OSE II in Canada. This can be confirmed or verified with a simple call to Environment Canada.

OSE II has been used for over 15 years in Canada, initially with Franz Environmental once a year in Whitehorse Yukon Canada, at the Yellow Knife Airport, and numerous other sites, some under NDA's
